I measured the Alpha Angle (angle from crown to toe of debris) at 16 degrees. This is a very low angle that signifies the avalanche ran about as far as it ever could based on the size of the path. I took 5 measurements using 2 inclinometers to make sure this was correct. Photo: GNFAC

Advisory Region
Northern Gallatin
Longitude
-110.97W

Latitude
45.42N
Avalanche Details: Big Deep Slabs in Maid of the Mist, Hyalite
