Natural and skier triggered slides in Hyalite

Divide Peak
Northern Gallatin
3/26/2020
Code
SS
Latitude
45.40290
Longitude
-110.97600
Notes

From obs: "Later in the day we ran across what we assume to be a remotely triggered avalanche from another party in the area. There were two sets of tracks on the adjacent slope with cracks visible on the slope. The avalanche occurred on a 40* east aspect at 9250' and failed on the MFcr/FC dn 35cm. .... Skiing out the trail with better light than in the morning, we saw a number of similar avalanches confined to east aspects on steep 40*+ rolls and presumably failing on the persistent grains above the crust."

Number of slides
3
Number caught
0
Number buried
0
Avalanche Type
Soft slab avalanche
Images
Skier triggered slide on Divide Peak
Slab Thickness units
centimeters
Single / Multiple / Red Flag
Multiple Avalanches
Advisory Year
19-20
