

**Stable and weak.** Dug a pit on an E aspect (HS 69cm) near Pika Point. Pit composition was fairly uniform, with multiple layers of different sized facets/rounding facets. Had a clean break, CT13, Q2 on facets beneath the Thanksgiving crust, though did not propagate (ETCN21). Found a 2 inch layer of near-surface facets, which will likely cause some problems with more precipitation on the way later in the week. Photo: GNFAC
