

Dry loose snow avalanches were observed on 10/10 as the recent snow settled. From e-mail "...saw some small, solar-initiated, dry loose snow slides in steep, rocky terrain (heads up ice climbers). With a firm surface beneath the new snow, these little guys were picking up steam quickly." Photo: B. VandenBos

Advisory Region Northern Gallatin Longitude -110.96W Latitude 45.45N **Avalanche Details:** <u>Wind slab and dry loose in Hyalite</u> Northern Gallatin, 2019-10-11
