## Skier remote triggered in YNP near Cooke

Pebble Creek - YNP
Out of Advisory Area
1/2/2021
Code
SS-ASr-R2-D2-O
Elevation
9100
Aspect
SE
Latitude
45.02540
Longitude

Skiers triggered a <u>slide</u> remotely, from low angle terrain, on a 9100' SE <u>aspect</u>. It was a 1.5'-2' deep soft <u>slab</u> (4F+ to F hard) that broke on weak sugary facets.

From obs: "Did a test pit at same elevation 30' away on S asp in thin area (HS70cm). ECTN6 down15 on new snow interface & ECTN 16 down 35 on the 4F+DF/RG: F, FC interface. We skinned around to the shoulder heard/felt a whumph (similar magnitude/duration/est. dist prop to other whumphs occurring in the last 2 days) and saw the avalanche. Trigger distance ~15' from first person."

Number of slides
