## Small skier triggered wind slab in Middle Basin

Middle Basin Northern Madison 3/26/2021 Code SS-ASu-R1-D1 Latitude 45.34260 Longitude -111.38400 Notes

From obs: "On Friday, my partner and I went into Middle Basin with the objective of skiing Middle Peak, and possibly the short <u>couloir</u> that splits the face. That morning we dug a pit on the east facing <u>aspect</u> of the beehive/middle basin ridge (ECTx). Encouraged by our results, we continued on to the base of middle peak and dug another pit (ECTp 30) on the south-facing ice crust. We continued on to summit middle peak and ski down the face to the entrance of the <u>couloir</u>, we descended 20ft into the entrance on soft loose snow and dug our third pit (ECTx), we replicated our results and decided the feature would be safe to ski. At ~1pm the first skier descended the slope, and triggered a small windslab (4-8in and 20ft wide) about 100ft down the slope and skied away uncaught. Skier 2, descended a lower angle slope to the east."
