Wind Slab triggered on Bradley's Meadow

Bradley Meadow Bridger Range 11/11/2022 Code HS-ASu-R1-D1-I Elevation 7800 Aspect E Latitude 45.83220 Longitude -110.92800 Notes

"... a small <u>wind slab</u> avalanche (R1 D1) from yesterday at approximately 7800 feet on the northern end of bradleys meadow. The <u>slide</u> was initiated by the second skier and although the rest of the slope was <30 degrees the <u>starting zone</u> was a NE facing steep cross loaded wind pillow just below the ridge.

As my friend was skiing down he saw a crack propagate up and to his left and was able to stop on the side of the path as the snow ran past him. The crown was approximately 30-40 feet and ran about 100 feet.

Here are the coordinates of a way point I dropped just above the top of the slide :

45° 50.0218? N, 110° 55.7420? W

we circled back and took a photo of the top as well ... "
