

Avalanche debris and crowns On blackmore

Date

Sat, 01/28/2023 - 15:05

Activity

Skiing

There were numerous debris piles, point releases, and crowns on the north face of Elephant and the northeast face of Blackmore this morning. Most of them appeared to have run during the storm (1/27) and had been covered by at least 6 inches of new snow.

Region

Northern Gallatin

Location (from list)

Mt Blackmore

Observer Name

Shawn Regnerus
