

Beehive area test scores

Date

Fri, 03/31/2023 - 11:00

Activity

Skiing

Toured in Beehive, Middle, and Bear Basins. In hand pits on W aspects we observed soft slab moving easily on a thin layer of facets over a melt-freeze crust buried about 40-50 cm. We dug on an E aspect at 9275' in Middle Basin and got ECTP24 on the same layer. Kept our objectives mellow. Did not observe any avalanche activity.

Region

Northern Madison

Location (from list)

Middle Basin

Observer Name

E. Donahue
