

Mixed bag in the bridgers

Date

Sat, 03/23/2024 - 12:10

Activity

Skiing

Walked out the north gate of bridger to the playground. Just north of Texas meadows observed a slide that ran sometime earlier in the week on a E aspect. Seems to have been triggered naturally by a loose wet coming out of the steep rocky terrain above. Ran about 200 feet was about 50-60 feet wide and crown was roughly 2-3 feet deep. Snow around the slide and on similar aspects was wet in the top 40 cms or so.

Around the corner dug a pit on a N aspect. Snow was significantly drier and deeper. HS 160 with plenty of weak snow at the bottom still. ECTX but did get failure and propagation on that lower layer with extra hits. PST 45/100 on the same layer 120 cms down.

Region

Bridger Range

Location (from list)

Playground
