Activity

Skiing

Toured up the Boundary of Yellowstone Park today. Performed [stability](#) tests on two different aspects at two different elevations and these were our results.

1. 9100', South [aspect](#), 120HS, Rounded FC at base. Recent storm interface found small .5mm FC 40cm down but no test results on that layer. ECTX
2. 9800', West [aspect](#), Hs190cm, ECTX, LOC 110cm down, old MFcr/Facet Layer

No recent avalanche activity seen. One large [collapse](#) near a ridge line with thin snowpack (<70cm)

Deep [Slab](#) on Northern aspects still a player. Rounding Basal Facets found on South and West aspects
