Activity

Skiing

Toured up Ellis. Observed well-preserved surface hoar in meadows and on the ridgeline on NE aspects. MF crust starting to form on SE aspects. Dug at 8230' on an ESE aspect. HS 120. Found the buried surface hoar layer from a few weeks ago down 25cm. Got collapsing but no propagation on this layer. Beautiful day!

Region

Northern Gallatin

Location (from list)

Mt Ellis

Observer Name

E. Donahue
