

Poor snow stability in Absaroka

Date

Sat, 02/22/2025 - 01:10

Activity

Skiing

From IG story. "[Cornice](#) triggered persistent on a protected north face up Suce Creek. 3-4 ft deep. Absarokas are not like the Bridgers, Gallatins, etc. A few weeks ago we found the entire snowpack to be faceted top to bottom in Mill Creek...."

Region

Out of Advisory Area
